SOLUTION BRIEF

Unlock document data at lightspeed with Document Automation.

Traditional intelligent document processing architectures support only manual and paper-based processes that are batch-focused, error-prone, and disconnected from the rest of the business.

The Automation Anywhere Document Automation solution harnesses AI-powered intelligent document processing connected to automation, so you can quickly extract and embed document data into the flow of work, all native to the Automation Success Platform.

Document Automation allows organizations to:

Accelerate business teams

Empower teams to quickly extract data, summarize documents, and eliminate hours of data entry.

Improve data quality

Eliminate human error and validate data before it enters your business-critical systems.

Meet regulatory compliance and standards

Protect your data and adhere to regulatory requirements.

Lower cost of ownership

Reduce the time to configure document extraction projects and get started instantly with pre-built document models.

# Put content into action with Document Automation

Fast and simple

Configuration made easy. Start with pre-built workflows, pre-built human-in-the-loop interfaces, and pre-trained document models to set up and configure document processing with minimal effort.

Connected

Document Automation is built directly into the cloud-native Automation Success Platform, with no additional software to install or maintain, allowing you to use the power of robotic process automation (RPA) to move document data across numerous systems.

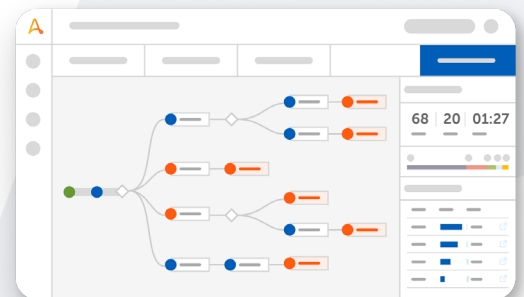

Open and extensible

Leverage an all-in-one solution with pre-built parsers for various document types, easily extensible with any extraction technology. Put generative AI to work and enhance your document processing capabilities with cutting-edge GPT-powered integrations to handle a lot more complex, unstructured document types.
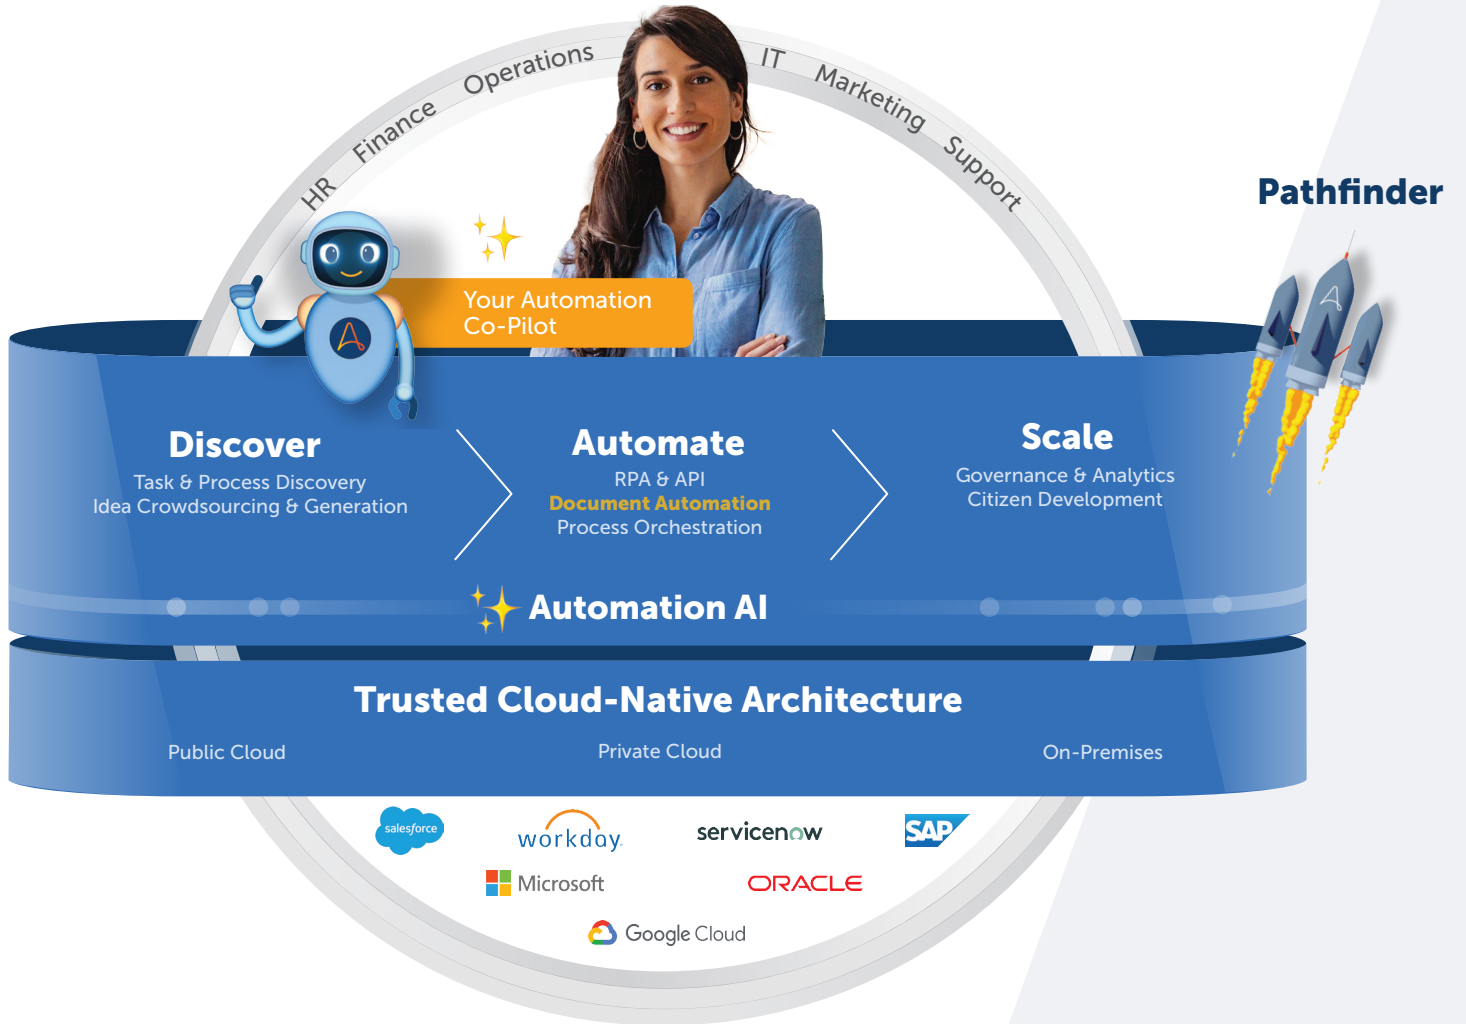

Intelligent

Benefit from industry-leading computer vision and natural language processing for fast and accurate understanding that gets smarter every time.

Built for success

Document Automation is built on the Automation Success Platform, making it simple to inject document data directly into any process, at scale.

AUTOMATION ANYWHERE

Document Automation supports a variety of use cases

Quickly automate document processing tasks across the business and embed data where you need it to be.

Top use cases for Document Automation
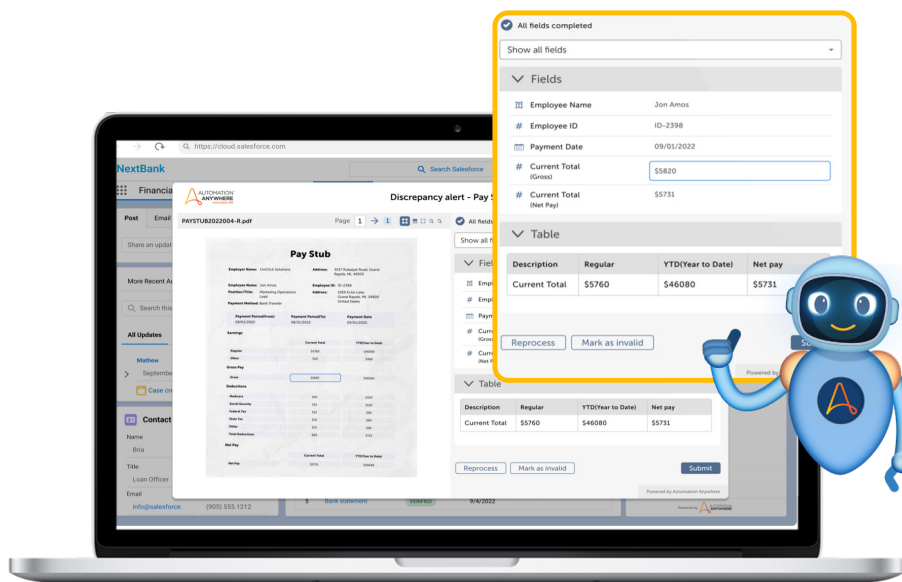

Structured documents

Automate and streamline forms and application processing to drive increased customer satisfaction.

Semi-structured documents

Automate processes with pre-built models for invoices, purchase orders, receipts, and utility bills.

Unstructured documents

Automate data extraction from complex and unstructured documents like contracts, waybills, and more.

Learn how you can use the power of automation and AI to unlock document data at lightspeed.
